

Performance Budget Fixture — Section 1

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 2

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 3

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 4

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 5

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 6

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 7

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 8

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 9

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 10

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 11

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 12

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 13

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 14

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 15

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 16

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 17

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 18

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 19

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 20

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 21

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 22

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 23

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 24

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 25

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 26

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 27

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 28

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 29

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 30

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 31

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 32

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 33

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 34

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 35

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 36

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 37

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 38

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 39

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 40

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 41

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 42

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 43

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 44

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 45

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 46

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 47

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 48

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 49

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Performance Budget Fixture — Section 50

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.

Konusbitr stores every bounding box in PDF user-space points with the origin at the top left of the unrotated page, which is the single convention the parser, the database and the viewer all agree on. A box that leaves the worker in any other frame is wrong everywhere downstream, and a highlight drawn a line too low reads as a bug rather than as an answer worth checking.
